(XXX) XXX-XXXX | josersanchez0117@gmail.com | josesanchez.dev | github.com/js5253

Education

DePaul University Aug. 2022 – Jul. 2026
B.S. Computer Science, Animation minor *Chicago, IL*

- **Courses**: Computer Systems, Data Structures, Analysis of Algorithms, Database Systems, Embedded Systems, iOS Development, Distributed Systems

Technical Skills

Languages: Typescript, Rust, Java, C, Python, SQL, Swift
Frameworks: Node.js, React.js, Nest.js
Cloud: Kubernetes (CKA Candidate, expected Dec. 2026), Docker, GitHub Actions
Tools: Git, Jira, Figma, Postman, Linux

Experience

Software Engineer Apprentice Aug. 2022 – Jul. 2026
Vail Systems *Chicago, IL*

- **Customer Service Communication Platform**: Accelerated project onboarding by scaffolding a **Next.js** project from scratch, establishing **CI/CD pipelines** and **Jest tests**. Translated business needs into **Jira** tickets and technology decisions. Led development on a full-stack **VoIP** application (similar to Google Voice) where customer service agents would make and receive calls through a web browser. integrated **Whisper (speech-to-text) and LLMs** for automated transcription/summarization, and built **WebSockets**-based features. Engineered intricate **webhook** flows to keep track of call lifecycles.
- **API Service Admin Portal**: Modernized a legacy Elm/Go-based project into a **Nest.js/React Admin**-based project. Used **Sequelize** and **PostgreSQL** as the data source. Integrated a pre-existing **Keycloak** enterprise authentication system to handle **OAuth** authentication and create safe, authenticated **REST APIs**. Accomplished thorough testing - frontend and backend - with **Jest**.
- Supported later cohorts with mentoring on HTML, React, and Javascript as well as project architecture.

Software Engineer Intern Aug. 2021 – Aug. 2022
iManage *Chicago, IL*

- Created components for a UI library used in internal and public projects.
- Attended workshops on software development concepts like data science/statistics, cybersecurity, Docker, and practiced these concepts in small projects.
- Supported less-experienced team members by providing instruction and leadership on Angular concepts and JavaScript functions.

Projects

Food log / nutrition tracker app | *Nest.js, Typescript, Sequelize, SQLite, React Native*

- Engineered a cloud-synced **REST API** (using **Nest.js**, **SQLite**, and **Sequelize**), while serving as the engineering mentor to guide a data science team through **React Native** development.
- Streamlined development and deployment by automating **OpenAPI** documentation and setting up continuous deployment through **Git**, **AWS EC2** and **PM2**.
- Implemented the USDA FoodCentral API as well as OpenAI image recognition API to make food-logging a one-tap process, allowing for the calculation of daily and historical nutrition based on the API responses.

Desktop document-to-speech app | *Tauri, Solid.js, Rust, Typescript*

- Designed a high-performance, cross-platform desktop application enabling users to convert PDF, ePub, or DOCX files into audio, for offline listening and accessibility.
- Designed an intuitive **Solid.js** user interface with best practices.
- Engineered a robust **Rust** backend with asynchronous (**Tokio**) processing for local **ONNX/sherpa.rs** text-to-speech inference, communicating with the frontend via **Tauri**.

Other Skills

Spoken Languages: English (Native), Spanish(Native)
